

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

FOREIGN DEPARTMENT SERIAL NO. 1.

RAJPUTANA

SANITARY, VACCINATION, DISPENSARY, AND JAIL REPORT FOR 1884.

Published by Authority.

CALCUTTA :

PRINTED BY THE SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA.

1885.

No.  $\frac{3108}{6}$  of 1885.

FROM

THE AGENT TO THE GOVERNOR GENERAL,  
RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,  
FOREIGN DEPARTMENT.

*Dated Abu, 8th October 1885.*

SIR,

I have the honor to forward the report for 1884 by Surgeon-Major L. D. Spencer, M. D., on sanitation, vaccination, dispensaries, and jails in the Native States of Rajputana and in Ajmere-Merwara.

2. During the year under review the births registered in Ajmere-Merwara amounted to 12,547, being 333 in excess of the number recorded in 1883, the number of deaths rose from 7,589 to 10,424, representing an increase of 37 per cent. upon the mortality during the previous year.

3. The compilation of vital statistics is still in its infancy in the Native States, and although some improvement is acknowledged to have taken place in the returns furnished from Ulwur, the table given in the 6th paragraph of the Superintendent-General's report is obviously defective. More complete records cannot, however, be expected in this early stage of statistical progress, nor have I deemed it politic to insist at once upon the submission of more elaborate returns. For the present we must, I fear, rest content with the information that has been supplied, and trust to time and the intelligence of Native Chiefs for further progress in this direction.

4. In 1884 an outbreak of cholera occurred at Ajmere, and the States of Dholpur, Bhurtpore, Jeypore, Kerowlee, Ulwur, Tonk, and Jodhpore were also visited by this epidemic. In Ajmere 227 deaths occurred out of 361 seizures, while in the Native States out of 2,278 cases, 1,056 proved fatal. The outbreak lasted from May to October.

5. The mortality from small-pox was greater than in 1883; 948 fatal cases occurred in Ajmere: of the 920 deaths from this cause in Native States, more than half the number is recorded against the city of Jeypore. The mortality from fever and bowel complaints was also higher than in the preceding year.

6. Dr. Spencer's report bears testimony to the improvements effected in Native States in the matter of sanitation, and there is much reason to hope that the measures already introduced may be more widely adopted, as the value and success of their results obtain recognition. Much of course is still needed, but it will be seen that during the year under review no little activity has been displayed in almost every State from Bhurtpore to Jodhpore, and from Bikanir to Jhallawar.

Important works are in progress for the better conservancy of Ajmere, notably the removal of sewage by rail, and the arrangements for supplying the town with filtered water. Although these matters have not yet reached an advanced stage, the municipality appears to show some appreciation of the great importance of the whole question, and may be trusted to bring to a satisfactory conclusion the work which has now been commenced.

7. I regret to observe that vaccine operations have declined in Ajmere during the year under review, owing, it is said, to the incompetency of the Native Superintendent. Arrangements have, however, been made to secure the

services of a more efficient man, and there is promise of better results being achieved in the current year. On the other hand, the report for the Native States is generally favorable, improvement being visible under every head except that of primary vaccination in which the success achieved falls slightly below the standard attained in 1883. It is satisfactory to observe that the violence of the opposition to vaccination appears to be diminishing in Rajputana.

8. No change is reported in the number of dispensaries established in Ajmere-Merwara. In Kerowlee three new ones were opened, which gives a total of 69 for the Native States. All these latter institutions are maintained at the sole expense of the Darbars, no subscriptions being received from the public or contributions from any local bodies.

The returns for Ajmere show a decline of 15 per cent. in the number of in-patients, and a rise of 2 per cent. in the aggregate of out-patients. In Native States the total of in-patients was nearly the same as in 1883, while the number of out-patients rose by 14 per cent., this result being due, no doubt, to an increase in the number of dispensaries. In Ajmere-Merwara and the Native States 45 per cent. of those who frequented the dispensaries were women and children. I notice with satisfaction an increase in the amount of subscriptions received from natives in Ajmere, while the large expenditure incurred in Native States is sufficient evidence of the appreciation in which the institutions are there held.

9. The statistics referring to the Ajmere jail exhibit a decided improvement upon the figures for 1883. Although there was an increase of 21 in the daily average number of inmates, the average daily number of the sick was 6, or the same as in the previous year. The two deaths which occurred during the year represented a mortality of only 3 per thousand, while in 1883 the death-rate was 11 per mille.

In the 13 prisons in Native States the average population aggregated 3,020, the death-rate was 45 per thousand, but if cholera, which is an exceptional death-cause, be excluded, the rate of mortality is reduced to 37 per thousand against 33 per mille in 1883. Cholera broke out in five jails causing 24 deaths out of 37 seizures. A new jail has been erected at Tonk, and plans are under preparation for the construction of a suitable building at Oodeypore. The prison at Kerowlee has been considerably enlarged, while at Jeypore and Dholpur some improvements have been introduced, but over-crowding still exists at both the latter places. It will be observed that the question of providing additional buildings at Jeypore is under the consideration of the Darbar.

I have the honor to be,

SIR,

Your most obedient Servant,

E. R. C. BRADFORD, *Colonel,*

*Agent to the Governor General.*

# REPORT

ON THE

## ADMINISTRATION OF RAJPUTANA

( SANITARY, VACCINATION, DISPENSARY, AND JAIL )

FOR

### 1884.

#### SECTION 1.—SANITATION AND VACCINATION.

##### METEOROLOGY.

TABLE 1.—*Rainfall of Ajmere.*

Year.	INCHES.			
	January to May.	June to September.	October to November.	Total.
1884 . . . . .	0.51	26.80	0.23	27.04
Average of previous six years . . . . .	1.85	20.63	0.91	28.39

1. The rainfall at Ajmere was more than  $3\frac{1}{2}$  inches in excess of the average for the previous 6 years and, greater by  $9\frac{1}{2}$  inches than in 1883. Twenty-seven inches fell during the year.

In Native States the fall varied much; in the northern States being much more than usual, while in the south the amount was below the average. It fell at the right time for the crops however, which were generally excellent throughout the province.

2. The Jeypore observatory continues to supply valuable meteorological information. The meteorograph, anemograph, and sun-shine recorder, and the other scientific apparatus, with the exception of the anemometer, are all in working order.

TABLE 2.

Year.	Rainfall.	Average price of wheat in the Ajmere division per rupee.		Death-rate per thousand of popula- tion.
	Inches.	Seers.	Chs.	
1880 . . . . .	34	11	10	31
1881 . . . . .	21	16	2	27
1882 . . . . .	27	15	12	18
1883 . . . . .	17	15	5	16
1884 . . . . .	27	16	3	22

3. The price of food, taking wheat as the standard, was lower than it has been since 1877.

VITAL STATISTICS.

TABLE 3.—*Death-rate of population of the Ajmere Division.*  
STATEMENTS I TO X.

Year.	DEATH-RATE PER THOUSAND POPULATION PER ANNUM.													PERCENTAGE AMONG TOTAL DEATHS.									
	Sex.			Season.				Causes.						Age.									
	Total.	Male. Female		Quarters of the year.				Cholera.	Small-pox.	Fever.	Bowel diseases.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
				1st	2nd	3rd	4th																
1883 . . .	16	17	16	20	16	16	12	0.19	1	10	2	0.57	2	27	20	5	2	2	8	9	9	9	9
1884 . . .	22	23	21	16	16	24	24	0.49	2	14		0.45	2	25	23	4	2	2	8	8	9	9	9

4. The death-rate rose from 16 to 22 per thousand, the increase being shown in 5 out of the 6 causes given in the above table. The greatest number of deaths took place in the 3rd and 4th quarters of the year. Forty-eight per cent. of the mortality occurred in children under 5 years of age, and 18 per cent. in people above 50, while the smallest number of deaths was registered in persons between the ages of 10 and 15 years. These percentages are nearly identical with those given in the report for 1883.

5. *Births.*—The birth-rate was 27 per thousand against 26 per mille in 1883. The remarkable variation in the ratios given for the different circles would seem to point to defective registration, which is apparently not properly carried out even in Ajmere town, Ajmere suburbs, and Beawar town, for, according to the returns, the deaths exceeded the births in these three circles by 8, 12, and 6 per thousand respectively. One hundred and sixteen males were born to every 100 females.

6. In Native States, as has been observed in previous reports, the importance of vital statistics is not as yet recognized. Efforts have been made through the Political Agents and Medical Officers to obtain the information asked for by the Surgeon-General in accordance with Statements I to X of the Standard Series. These efforts, however, have met with but little success, and in consultation with the Agent to the Governor-General it has been decided that it is undesirable to press for the submission of returns as elaborate as those asked for. It is considered that for the present, at any rate, we had better be content with the information given in the form appended and marked Table 4. It is hoped that in time the advantages to be derived from the acquisition of this kind of knowledge will be perceived, and that then a staff, which does not now exist, for the collection of these statistics will be organized in each State. It will not be out of place to insert here paragraph 11 from my Report for 1882. It is there observed—"It is not many years since sanitation was almost totally disregarded in Europe, and it is only recently that anything like a sound public opinion has been established on the subject amongst Western communities. It is not therefore surprising to find that though individuals here and there dimly perceive the importance of hygiene, the people generally in Native States are good-naturedly indifferent to it. The progress made in the endeavour to break ancient habits and to change immemorial customs is generally slow, and the process while necessitating tact requires, perhaps, above all things patience. It may be as well also to mention here, that we owe any information received regarding jails and medical or sanitary arrangements in Native States entirely to the courtesy of the different Darbars. Under these circumstances anything but criticism of the mildest character would be out of place in this report; for if dissatisfaction with the statistics furnished were published, it would probably have a deterrent effect and might lead to the information required being either only partially supplied or altogether withheld. Rajputana, therefore, differs widely from those Provinces in which it is merely necessary to issue an order to have it promptly executed."

TABLE 4.—*Births and Deaths in Native States.*

NAME.	Population according to census of 1881.	BIRTHS.				DEATHS.								
		Male.	Female.	Total.	Ratio per 1,000 of population.	Cholera.	Small-pox.	Fever.	Bowel diseases.	Snake-bite.	Injurious.	All others.	Total.	Ratio per 1,000 of population.
Jeypore (city) . . .	142,578	2,270	2,213	4,483	31	52	484	2,487	518	...	...	2,085	5,626	39
Bhurlpore (city) . . .	66,163	...	...	931	14	...	...	...	...	...	...	1,063	1,063	16
Ulwur (city) . . .	49,897	...	...	...	...	4	54	346	27	...	...	671	1,004	20
Oodeypore (city) . . .	38,214	...	...	596	15	...	4	614	31	5	18	113	984	26
Jhalrapatan (city) . . .	11,469	178	134	312	27	...	2	129	56	...	10	3	300	17
Bhurlpore (State) . . .	579,377	...	...	992	2	30	88	691	...	1	7	51	868	3
Jhallawar (State) . . .	340,468	1,743	1,296	3,039	9	...	61	1,533	897	...	123	296	2,899	8
Ulwur (State) . . .	683,059	9,424	7,149	16,573	24	49	207	6,428	891	...	268	598	8,441	14
Total . . .	1,861,215	13,624	10,792	26,936	14	135	920	12,430	2,390	6	425	4,778	21,064	11

7. The above table affords all the information regarding vital statistics received from Native States. Efforts will continue to be made to improve the accuracy and completeness of this return, which is at present obviously defective in both of these qualities. The statistics from Ulwur are fuller and more correct than those furnished by the other States, which is accounted for by the Maharaja taking an enlightened interest in the subject. The returns for the city of Jhalrapatan and the State of Jhallawar have not yet been received, but should they arrive in time the figures will be entered in Table 4.

## CHIEF DISEASES.

8. *Number of deaths in the Ajmere Division.*—The following table shows the total number of deaths recorded from disease and injuries :—

TABLE 5.—*Deaths according to diseases in the Ajmere Division.*

## STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fever.	Bowel complaints.	Injuries.	All others.	TOTAL.
1883	87	579	4,719	824	261	1,119	7,589
1884	227	948	6,428	1,205	207	1,409	10,424

The mortality was greater by 37 per cent. than that registered for the previous year, the increase being markedly shown in 5 out of 6 headings in the table.

9. Ajmere was again visited by an epidemic of cholera, which, however, was neither so severe nor so widespread as in 1882. Cases were recorded in 11 out of the 23 circles, but the suburbs and town of Ajmere suffered much more severely than the outlying districts.

10. The Officiating Civil Surgeon states that the first case occurred on the 25th of May in a woman lodging in a hut in the suburbs of Ajmere who arrived the day before *via* Agra from Aligarh, where people were suffering from cholera. Disinfectants were freely used about the hut, clothing, &c., of the patient, and the usual sanitary precautions adopted. There was no apparent difference between the site and surroundings of this hut and the other huts where cholera did not occur.

11. Another seizure did not take place in the neighbourhood of Ajmere until the 15th of June, when 2 persons were attacked, and 4 more cases speedily followed. These 6 cases all occurred near the Delhi and Madar Gates of the city. The disease now remained quiescent for some days, bursting out again on the 2nd of July in the city and suburbs, where before the end of the month 253 persons were attacked, of whom 114 died. In August 84 cases with 43 deaths occurred, the disease finally disappearing from the suburbs and from the division on the 7th of September.

12. One hundred and twenty-nine cases with 59 deaths took place in the town of Ajmere, and 222 cases with 107 deaths in the suburbs, all of which were seen by the Medical Staff. Fifty-six deaths were reported by the police in the outlying districts, and 10 persons, of whom 5 died, were attended by Hospital Assistants. The total number of cases treated by the Medical Staff, therefore, was 361, of which 171 died. Adding to these the 56 deaths reported

by the police brings the number of fatal cases registered during the epidemic to 227. It is remarkable that in the Merwara Battalion lines, in the Mayo College and ground, and in the jail, where sanitation is closely attended to, not a single case of cholera occurred.

13. The arrangements made by Dr. Crofts for the treatment of the sick were excellent. He did what lay in his power to meet the sanitary requirements of the station, and the untiring energy displayed by him throughout the epidemic was most praiseworthy. Dr. Crofts speaks in high terms of Apothecary C. Pierce of the Railway Department, who held executive charge of the cholera hospital, and also of Hospital Assistant Elahi Buksh of the Ajmere Dispensary, both of whom, with the staff under them, did their best to relieve those suffering from the malady.

14. In Native States the number of cases of cholera recorded in the weekly returns was 2,278, of which 1,056, or 46 per cent., proved fatal. Seven States were more or less affected by the disease, which was much more severe than in 1883, and caused a greater mortality than in 1882, when a larger number of persons were attacked by it. As far as can be ascertained, it commenced about the middle of May and ended on the 23rd of October.

TABLE 6.—*Cholera reported weekly by the Native States at the time of its occurrence.*

NAME.	Cases.	Deaths.	Percentage of deaths to cases.	
Jeypore (city) . . . . .	39	38	97	
Bhurtpore (city) . . . . .	65	29	44	
Dholpur (city) . . . . .	459	121	26	
Kerowlee (city) . . . . .	364	174	48	
Tonk (city) . . . . .	188	108	57	
Deoli (Cantonment) . . . . .	1	1	100	No case or death is recorded against Ulwur city in the weekly reports.
Jeypore (State) . . . . .	289	248	86	
Jodhpore (State) . . . . .	438	134	30	
Bhurtpore (State) . . . . .	213	121	57	
Ulwur (State) . . . . .	38	16	42	
Dholpur (State) . . . . .	136	40	29	
Kerowlee (State) . . . . .	48	26	54	
Total . . . . .	2,278	1,056	46	

15. The first cases were reported in Dholpur and Bhurtpore on the 16th and 17th of May, and between these dates and the 31st of August and 3rd of September, 595 seizures with 161 deaths had taken place in Dholpur and 278 seizures with 150 deaths in Bhurtpore.

16. In Jeypore, according to the weekly returns, cholera appeared at two places on the 24th of May; the Agency Surgeon, however, in his annual report states that a case, followed by three others, was said to have occurred on the 6th of May. The first authentic case was apparently that of a boy who came from Muthra, where cholera was prevalent, and died on the platform at Bandikui on removal from the train. Three hundred and twenty-eight cases and 286 deaths were registered before the disease disappeared from Jeypore and from Rajputana on the 23rd of October.

17. In Kerowlee the first case took place on the 27th of May, and before the disease ceased on the 11th of September, 412 persons were attacked and 200 died of it. The epidemic was sharply felt in the city, where 174 deaths occurred out of 364 seizures.

18. In Ulwur, between the 4th of June and the 9th of August, there were 38 cases and 16 deaths, these being reported from 12 different localities.

19. On the 5th of July cholera broke out at Pali in Jodhpore, and subsequently a few cases occurred at Sojat. It fell with considerable severity upon Pali, which the Agency Surgeon says was the dirtiest town in Marwar, with a water-supply drawn from a tank which must have received much of the surface drainage. The inhabitants believe that the disease was introduced from Ajmere by a passenger in the railway, but the grounds for this belief were not

substantiated by enquiries made on the spot. It is stated that in spite of its filthy condition the town has been free from cholera for 15 years. The epidemic has not proved an unmixed evil, since its occurrence caused the place to be cleansed, and sanitation to be somewhat attended to. Four hundred and thirty-eight seizures and 184 deaths were reported at Pali and Sojat, of which 33, with 12 deaths, happened at Sojat, the Agency Surgeon attributing the comparative immunity to the superior sanitary state of this town. The last case was registered on the 26th of September.

20. One doubtful case was reported from the cantonment of Deoli on the 21st of July.

21. On the 11th of August the city of Tonk was attacked by the disease which disappeared on the 23rd of September, causing during that time 108 deaths out of 188 cases. The measures recommended by 1st Class Hospital Assistant Purbhu Lall, who has submitted a creditable report on the epidemic, were judicious, and would seem to have been promptly adopted by the Darbar. Before the appearance of cholera at Tonk it had been prevalent in several adjacent villages, the inhabitants of which had free intercourse with the people of the city. The first case occurred in a sepoy, aged 22, of cleanly habits, who, when he was not on guard at the gate, lived, with 8 others, in a house capable of accommodating 20 people, in which a person died of cholera in 1882. The house itself apparently only differed from its neighbours by being in a better sanitary condition than they, but the street in which it is situated is  $7\frac{1}{2}$  feet wide and was very dirty. The sepoy was the only person in the street who suffered from the disease. The water-supply was drawn from a well, 48 feet deep, used for both bathing and drinking purposes. The water was low, and was probably contaminated by the dirty mud surrounding the mouth of the well.

22. The figures regarding cholera given in this report have been taken from the Monthly Returns submitted to the Sanitary Commissioner with the Government of India, as it is considered that these figures are less likely to be incorrect than those furnished at the end of the year by the different Darbars. The discrepancy in the number of deaths entered against 2 States and 2 cities in Table 4, and those recorded against the same States and cities in Table 6, illustrates the difficulty of obtaining exact information from the Raj authorities, who, however desirous they may be of affording it, are without the means of collecting the required data. The deaths registered against cholera therefore (and the same applies to other diseases), must be looked upon as only giving some idea of the number of those who died. The mortality may have been much greater, or in the absence of persons with medical knowledge certain diseases may have been credited with deaths which should have been debited to other maladies.

23. Small-pox was widely distributed in the Ajmere Division, fatal cases occurring in 21 out of the 23 circles of registration. Nine hundred and forty-eight persons died of the disease, of whom 17 only were over 12 years of age. The deaths in Kekri Town and Sawer District reached the high figure of 7 and 6 per thousand of population. These returns bring prominently to notice that the extension of vaccination is a matter of vital importance.

24. More deaths from small-pox were reported from Native States than in the previous year. According to Table 4, there were 920 fatal cases of which more than half are shown against the city of Jeypore.

TABLE 7.—Quarterly deaths from Cholera and Small-pox in the Ajmere Division.

STATEMENTS VII & VIII.

	QUARTERS OF THE YEAR.				TOTAL.
	1st.	2nd.	3rd.	4th.	
Small-pox . . . . .	293	521 <sup>40</sup>	94	40	948
Cholera . . . . .	...	8 <sup>1</sup>	219	...	227

25. Table 7 shows the quarterly distribution of deaths from small-pox and cholera in the Ajmere Division.

26. Referring again to Tables 5 and 4, we find that fevers and bowel complaints caused a much larger mortality both in the Ajmere Division and in Native States than in 1883. This exemplifies what appears to have been the invariable rule in Rajputana, *viz.*, that much sickness

follows much rain. Probably a large proportion of this sickness is preventible, and in course of time will gradually disappear before improved drainage, increased cultivation, and other sanitary measures.

#### SANITATION.

26. *Ajmere Division.—Ajmere.* The arrangements for the removal of the sewage by rail, and for supplying the town with filtered water are not yet completed, but it is expected they will be finished by the end of this year or the beginning of 1886. The Municipal Committee has paid considerable attention to sanitation, but progress is slow. Something, however, has been accomplished, though much remains to be done, and unless it be done quickly, the health of the people must suffer. The Officiating Civil Surgeon called the attention of the Committee during the cholera epidemic to some reforms which have long been urgently required, and it is hoped that some of them will be presently carried out. Several of the members fully recognize the paramount importance of sanitation, and large sums have been spent on its improvement.

27. Each vaccinator's knowledge of the Sanitary Primer is tested in Ajmere and in Native States, and he is instructed to take every opportunity of spreading information regarding the laws of health amongst the villagers. The Primer has also been introduced into some of the schools.

28. *Native States.*—A general, if a somewhat unequal, advance has been made in sanitation by the Native States. This advance is shown not only by an increasing interest in the cleanliness of the cities, but also by improvements effected in jails and dispensaries. When it is remembered that not so many years ago (see report for 1872, paragraph 5) some of the prisoners in Rajputana picked up a precarious subsistence by begging in the streets, it will be readily admitted that their present condition, though in some instances leaving much to be desired, is one of comparative health and comfort.

29. *Jeypore.* Dr. Hendley in his annual report remarks: "The adoption of a complete conservancy scheme for Jeypore has been postponed pending the completion of some great district engineering works, after which the Executive Engineer, Colonel Jacob, proposes, with the consent of the Darbar, to transfer a portable railway to the city, which will enable the Municipality to have the rubbish and excreta collected by the present conservancy staff at depôts at convenient distances and then removed by rail to the suburbs." Several minor improvements were sanctioned, *viz.*, the purchase of 20 conservancy carts, the erection of two sample latrines and four urinals, each of the latter being provided with swing buckets. In two districts progress has been made in village sanitation, but in other parts of the State Dr. Hendley considers it doubtful whether much has been done in this direction.

30. In Ulwur, owing to the intelligent interest taken in the subject by His Highness the Maharao Raja, the advance reported in previous years has, it is believed, been fully maintained.

31. In Jodhpore, hitherto backward as regards the science of health, a sanitary movement has been initiated by the Municipal Committee appointed by the Darbar. The staff of sweepers has been reorganized and increased, rubbish carts purchased, and latrines, as an experiment, erected.

32. Oodeypore, Kotah, Jhalrapatan, Bhurtpore, and other cities are kept clean by sweepers regularly employed and the filth is removed in carts or on buffaloes.

33. At Kerowlee a Municipal Committee has been established by the Darbar, the President of which is the heir-apparent of this ancient line. Under their auspices the sanitation of the city is now attended to, and the jail and dispensary have been much improved. Seven years ago pigs, dogs, and cattle, aided by the fowls of the air, were the chief if not the only scavengers.

34. Even far away in the desert at Bikanir, they are buying rubbish carts and improving the jail, and they would have erected latrines had they been encouraged in doing so. But in a place like Bikanir, with a light, dry, sandy soil, with the water 300 feet from the surface, and with only a few inches of rain a year, it is, in my opinion, better to mark off carefully selected areas, to which the people will willingly resort, than to press them to visit latrines which, without constant supervision, rapidly become abominably offensive.

35. While, therefore, an enormous amount remains to be done, it can be confidently asserted that something has already been effected, and that progress is being made towards the improvement of sanitation in Native States.

## VACCINATION.

TABLE 8.—*Vaccination. Statements I and II.*

		Average number of Vaccinators.	PRIMARY VACCINATION.			RE-VACCINATION.			Cost.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
										Pie.	
Ajmere Division	1883	6	5,041	4,773	89	1	...	...	778	33	840
	1884	6	4,626	3,933	86	35	29	82	749	36	777
Native States	1883	74	114,307	107,628	94	408	291	71	10,826	19	1,550
	1884	74	142,896	131,806	92	850	700	82	11,247	16	1,943

36. In the Ajmere Division there was a decrease in the total number operated on, in the number of successful cases, in the percentage of success, and in the average number of operations performed by each vaccinator. The total cost was a little less than for the previous year, while the average cost of each successful case was higher by 3 pie. Details are shown in Table 8.

37. The Civil Surgeon of Ajmere, who is also Superintendent of Vaccination, remarks that "For nearly two months the establishment was short by one vaccinator, which in part accounts for the falling off;" and again "The Native Superintendent has not been a success since his appointment, being listless and wanting in energy, and the Civil Surgeon is generally too fully occupied to be able to thoroughly supervise the working of vaccination."

38. There is no doubt that the small number of persons vaccinated, and the low percentage of success, are due chiefly to want of supervision. As the Civil Surgeon has not much time to give to the work, it is essential that he should have a really good Assistant, and it was thought that such a man had been secured, but unfortunately after a year's trial he has proved a failure. Endeavours are now being made by the Civil Surgeon to find an efficient Native Superintendent, and if successful in his efforts vaccination should soon improve both in quantity and quality.

39. In Native States the number of successful vaccinations increased by 22 per cent. This increase, which occurred in 11 out of 15 States, was most conspicuous in Jeypore, where more persons were successfully vaccinated by 78 per cent than in 1883. The adoption of the dispensary system mentioned in last year's report partly accounts for the additional number of operations performed in Jeypore. This system is on its trial in this State, and should experience decide against it the present arrangements will be modified.

40. The decrease in Ulwur would seem to have been mainly due to the Native Superintendent being unfit for duty during half of the season, and in Bhurtpore, Tonk, and Kerowlee to the difficulty experienced in establishing a good vesicle, and to inefficient supervision.

41. The percentage of success in primary vaccination, 92, is less by 2 per cent. than in 1883, and varies among the larger States from 99 in Ulwur to 87 in Jeypore. Of the smaller States Shahpura as usual is lowest on the list, but it is hoped that a change may be effected by the vaccinator recently appointed.

42. Eight hundred and fifty persons were re-vaccinated with a success equal to 82 per cent. It seems probable, however, from the returns, that the term "re-vaccination" is not understood by the vaccinators in Jeypore and Sirohee. Steps will be taken to insure the meaning of the word being made clear to them.

43. The average number of persons vaccinated by each vaccinator increased by 25 per cent. The reason, as explained in previous reports, for the remarkably high averages recorded in Bhurtpore and Kerowlee, is that in these States it has long been the custom for the Hospital establishment to assist in the work.

44. The establishment remained the same as in the previous year and numbered 74 vaccinators.

45. The expenditure was larger by nearly 4 per cent. than in 1883, the increase being chiefly shown under the head of travelling allowance. The average cost of each successful case was 16 pie against 19 pie in 1883, and varied from 7 and 9 pie in Bhurtpore and Kerowlee to 60 in Bikanir. The explanation given in paragraph 43 accounts for the small expenditure in Bhurtpore and Kerowlee, while the high average in Bikanir is obviously due to the small number of operations performed by the single vaccinator employed in that State.

B

Table 9. *Verification of returns of vaccination.*

Name of District or State	Superintendent and Native Superintendent.	Number of villages visited.	Successful cases seen.				Unsuccessful cases seen.	Total number seen. 	{ Native Superintendent . .	...	...	...	None.	...	...	...	...		
Total of Native States.		1,188	14,548	19,330	5,290	39,168	2,307	41,372	94.06	134,666	30.72

46. The above table shows the extent to which supervision has been exercised, and the result of inspections during the past year. That it is not so favorable a record as for 1883 is chiefly attributable to the excellent Native Superintendent of Ulwur, Raja Ram, having met with an accident which incapacitated him for work during half the season. The Superintendent of Kotah and Jhallawar did not see many cases as he only rejoined his appointment on the 9th of December, but a considerable number of villages (83) were visited, while the Superintendent of Oodeypore, owing partly to ill-health and partly to his presence being required at head-quarters, only inspected 25 cases and 2 villages. One thousand, nine hundred and sixty-seven cases were seen by the Superintendent-General, of which 97 were unsuccessful. The manner in which vaccination has been extended in Jeypore and Marwar speaks well for the energy of Surgeon-Major Hendley and Surgeon Adams, while in Ulwur it is not too much to say that the work is about as good as it can be and reflects much credit on Surgeon-Major T. French Mullen, who for many years has taken great interest in vaccination, and has never spared himself in promoting it. Several instances are reported of parents going out of their way and taking some trouble in order to have their children vaccinated, and there is no doubt that opposition, though still in some parts pretty active, is gradually giving way.

## DISPENSARIES.

## SECTION II.

47. In the Ajmere Division no dispensary has changed its class during the past year, while the number of the institutions, 7, remains the same as in 1883. The Beawar dispensary has been enlarged and improved, and some alterations in the building at Todgarh are under consideration.

48. In Native States 2 dispensaries fell from the 1st to 2nd class, and 6 rose from the 3rd to the 2nd class. Three new dispensaries were opened in Jeypore during the year, which brings the total number of these institutions in Native States up to 69.

TABLE 10.—*Cases and Deaths.*

## STATEMENT II.

		CASES TREATED.		DAILY AVERAGE.		AVERAGE DURATION.		Percentage of in-door in total cases.	DEATHS.	
		In-door.	Out-door.	In-door.	Out-door.	In-door residence.	Out-door visits.		In-door.	Percentage to cases In-door.
Ajmere Division	{ 1883	740	38,273	35	248	17	2	2	51	7
	{ 1884	623	39,225	25	247	15	2	2	71	11
Native States	{ 1883	4,372	282,903	221	2,948	18	4	1	251	6
	{ 1884	4,381	324,918	222	3,273	18	4	1	238	5

49. In the Ajmere Division there were 117 (15 per cent.) fewer in-patients treated, the decrease being chiefly shown in the Beawar and Ajmir Dispensaries. The mortality increased by 4 per cent. The average time of residence in hospital was shorter by 2 days than in 1883.

50. The number of out-patients in the Ajmere Division increased by more than 2 per cent., the increase being most marked at Beawar and Todgarh. At Ajmere, Masuda, and Ramsar fewer out-patients attended than in 1883, the falling off being most conspicuous in the returns of the Ajmere Dispensary. Each out-patient paid on the average 2 visits to hospital as in 1883. The percentage of in-patients to total treated, 2, was the same, and the average attendance of out-patients, 247, was 1 less than for the previous year.

51. In Native States, as will be seen by a reference to Table 10, the details regarding in-patients are nearly the same as those recorded for 1883.

52. There was an increase in Native States of more than 14 per cent in the number of out-patients, and of 11 per cent. in the daily average attendance, the average number of visits to hospital by each patient being 4 as in 1883. An increase in the total number treated took place in 13 States and 47\* dispensaries, a decrease being shown in 2 States and 19 dispensaries. In comparing the number of out-patients for 1883 and 1884, it should be remembered that 3 new dispensaries were opened in 1884.

TABLE 11.—*Causes of Admission and Deaths.*  
STATEMENT III.

		PERCENTAGE IN THE TOTAL CASES AND DEATHS.									
		Malarial fever and spleen.	Cholera.	Rheumatism.	Ophthalmia.	Respiratory diseases.	Diarrhoea and dysentery.	Boil, abscess and ulcer.	Skin diseases.	Injuries.	All others.
		<i>Cases in-door and out-door.</i>									
Ajmere Division	1883	12	0.21	4	12	6	7	17	7	4	31
	1884	16	0.48	4	13	6	5	16	7	4	29
Native States	1883	13	0.14	5	9	6	4	18	11	3	31
	1884	18	0.36	5	8	6	5	16	10	3	29
		<i>Deaths in-door.</i>									
Ajmere Division	1883	20	6	..	...	6	33	...	...	...	35
	1884	20	4	...	...	9	35	1	...	1	30
Native States	1883	9	4	...	...	17	19	3	0.39	9	39
	1884	12	1	...	...	14	17	1	...	10	45

53. In the Ajmere Division abscess, boils, and ulcers caused 16 per cent. of the admissions, being 1 per cent. less than in 1883. Malarial fever and spleen also contributed 16 per cent. of the sickness, which is an increase of 4 per cent. on the previous year. The increase in the number of admissions from malarial fever shown in all the dispensaries, and particularly at Beawar, is the most noticeable feature of the year in the medical history of these institutions. Although cholera was more prevalent, bowel complaints gave rise to less sickness by 2 per cent. than in 1883, the difference in the number of cases treated in the 2 years being most marked in the returns of the Ajmere Dispensary.

The number of seizures and deaths from cholera which occurred among patients seen by the medical staff has been already given. The percentages of the other diseases given in Table 11 are almost identical for the 2 years.

In the same table is shown the variation in the percentages of deaths for 1883 and 1884. Respiratory diseases were more fatal by 3 per cent. and bowel complaints by 2 per cent. than in the previous year; but the total number of in-door patients treated for those diseases is too small to enable useful deductions to be made from the mortality caused by them.

54. In Native States (Table 11) malarial fever was 5 per cent. more frequent and 3 per cent. more fatal than in 1883, 18 per cent. of the admissions and 12 per cent. of the deaths being due to this cause. Abscess, boils, and ulcer occasioned 16 per cent of the sickness and 1 per cent. of the mortality, each being lower by 2 per cent. than in the previous year. Respiratory diseases and bowel complaints caused 6 per cent. and 5 per cent. of the total number of cases, against 6 per cent. and 4 per cent. in 1883, and 14 per cent. and 17 per cent. of the death-rate, these ratios being less by 3 per cent. and 2 per cent. than those recorded for the previous year.

\* The 3 Dispensaries opened during the year have been excluded.

1,191 out-door and 8 in-door patients, of whom 2 died, were treated for cholera. One hundred and forty-eight cases of small-pox, 71 of which occurred at Shahpura, were attended to by the medical staff.

55. In Native States, as in Ajmere, the most noteworthy circumstances in the medical history of the dispensaries for the year is the large increase compared with 1883 in the number of cases admitted for malarious fever. The same percentage, 18, on the total number of cases was recorded in 1881 when a heavy rainfall was also registered in most parts of the province. The increase is shown in all the States but one, that of Pertabgarh, and in 62 out of 66\* dispensaries and occurred in Kotah and Jhallawar, where it rained less than usual, as well as in Bhurtpore and Ulwur, where the fall far exceeded the average. It is difficult, however, to obtain exact information regarding the rainfall in outlying districts, and it may be that more fell there than was collected in the cities of Kotah and Jhalrapatan.

TABLE 12.—*Influence of Season on Mortality.*

		PERCENTAGE OF TOTAL DEATHS AMONG IN-PATIENTS.			
		Quarters of the year.			
		1st.	2nd.	3rd.	4th
Ajmere Division . . . . .	1883	27	18	20	35
	1884	20	27	25	28
Native States . . . . .	1883	19	30	24	27
	1884	20	27	25	28

56. From the above table it appears that the percentage of deaths amongst in-patients was the same in each quarter of the year in the Ajmere Division as in Native States, the highest mortality in both being registered in the 4th and 2nd quarters, and the lowest in the 1st quarter of the year.

TABLE 13.—*Sex, Age, and Caste.*

## STATEMENT IV.

		PERCENTAGE IN THE TOTAL TREATED.				
		Men.	Women.	Children.	Hindus.	Mussalmans.
Ajmere Division . . . . .	1883	59	19	22	70	25
	1884	55	17	28	67	25
Native States . . . . .	1883	58	18	24	65	31
	1884	55	19	26	65	31

57. Forty-five per cent. of those who attended the dispensaries, both in Ajmere and in Native States, were women and children, which gives an increase of 4 per cent. and 3 per cent. respectively. Both in Ajmere and in the Native States more than twice as many Hindus were treated as Mussalmans.

58. In the Ajmere Division 138 major operations were performed with 6 deaths, against 128 with 3 deaths in 1883.

One hundred and ten of these operations were done in the Ajmere Hospital chiefly by Dr. Crofts, who officiated as Civil Surgeon for eight months, and partly by Dr. Newman, the permanent incumbent, who held charge of the appointment for 4 months of the year. The lens was extracted in 29 cases. Nine persons were operated on for stone by lithotomy, and one by lithotriety, all of whom recovered. The superior maxillary bone was removed for disease. Fourteen amputations were performed, 1 being of the thigh; all of these cases were discharged cured. There were 3 deaths; one occurred after difficult labour, 1 subsequent to the opening of an abscess of the liver, and 1 after tapping for dropsy.

59. Seventeen operations were done at Beawar. Nine patients were cut for stone, of whom 3 died. None of the other cases proved fatal.

One person was operated on for stone successfully by lithotomy at the Todgarh Dispensary. There was an increase of 12 per cent. in the number of minor operations performed in the Division during the year.

60. In Native States 515 major operations were performed and 12 deaths occurred, compared with 439 operations and 15 deaths in 1883. In contrasting the numbers for 1883 and 1884, given in the different groups in table 14, we find that operations on the eye rose from 32 to 39, those for all other tumours from 59 to 78, and for stone from 47 to 56. The numbers under the other headings vary but little for the two years. Sixty cases of iridectomy, and 13 cases of cataract were operated on in the Jeypore State, 16 and 5 of them being done at the Mayo Hospital and the others by the Agency Surgeon while on tour. The lens was also extracted 3 times at Abu and once at Ulwur. Thirteen of the 53 amputations were done at the Jeypore Mayo Hospital, and 5 at other dispensaries in the State, 12 in Jodhpore, 7 in Ulwur, and in Bhurtpore and Oodeypore 5 each. Ten operations for lithotomy were performed in the Jeypore State, 8 in Bhurtpore, 7 at Kherwara, 6 at Kerowlee, 5 at Ulwur, and 4 at Jodhpore, and in addition to these 16 persons were cut for stone at other dispensaries in the province. The number of dislocations returned is again large, and especially so in Bhurtpore and Jodhpore, which States, as usual, head the list for accidents of this nature.

Of the 12 deaths, 6 took place after amputation (3 thigh and 3 arm), 2 after lithotomy, and 2 after excision of bones; 1 occurred after the removal of a tumour, and 1 subsequent to tapping for dropsy.

Eighteen thousand, eight hundred and seventy-six minor operations were performed against 17,850 in the previous year, which gives an increase of 5 per cent.

61. Eighty-one major operations were done at the Jeypore Mayo Hospital, and of these four ended fatally. Dr. Owen, C.I.E., officiated as Agency Surgeon from the 1st of January till the 26th of August, Dr. Martin succeeding him in the officiating appointment on the 14th of October. Dr. Hendley, the permanent incumbent, rejoined from leave on the 26th of October, and has submitted an excellent annual report on the working of the institutions under his charge.

Sixty-one major operations were performed in the Jodhpore Main Dispensary, but 23 of these were for reduction of dislocation. Two deaths occurred, 1 following lithotomy and the other after amputation of the arm.

In the Anah Hospital at Bhurtpore 40 operations were done with 1 death, but 9 of these were for reduction of dislocation and 9 for the relief of dropsy.

At Ulwur 29 operations were performed and 1 death resulted. At Oodeypore Dr. D. French Mullen excised the elbow joint, and Dr. Crofts at Kotah removed the lower jaw, both operations being successful.

Statement C, which is appended, gives the names of the Dispensaries where the operations were performed.

TABLE 15.—*Surgical Operations for Mycetoma.*

NATURE OF OPERATIONS.	No.
Amputation of forearm . . . . .	2
„ of hand . . . . .	4
„ of foot . . . . .	4
Excision of soft part of foot . . . . .	13
TOTAL .	23

62. This table shews the number of operations for mycetoma and the parts which the disease made it necessary to amputate or excise. Ten of these operations were performed in the Ajmere Dispensary and 8 in the State of Jodhpore.

		Cost per diet per diem . . . . .	.	.	.	17	16	...

63. In the Ajmere Division there was an increase of income on the previous year equal to 4 per cent., which was chiefly due to the credit balance being larger on the 1st of January 1884 than in 1883, and partly to the receipt of additional subscriptions. Subscriptions from Europeans fell from Rs. 423 to Rs. 284, while the sum collected from Natives rose from Rs. 1,313 to Rs. 1,767, the rise being confined to Ajmere. No money was subscribed by private individuals at Masuda, Pisangan, Todgarh, and Kekri, but the Kekri Municipality contribute Rs. 200 yearly to the Dispensary Fund. The amount of invested capital is shown in Part II of Statement V.

64. The expenditure was larger by 30 per cent. than in 1883 (Rs. 7,811 against Rs. 10,217) the increase being almost entirely shown under the head of Building. Rs. 2,541 were spent in enlarging the Beawar Dispensary and Rs. 400 in improving the dispensary at Todgarh. Alterations and repairs were also carried out in the institutions at Kekri and Ajmere, involving an outlay of Rs. 204 and Rs. 102 respectively. The debit balance against the dispensaries has not been included as formerly under "miscellaneous charges," but the amount is shown against each institution under the column "Remarks" in Statement V, Part I. The Beawar Dispensary has incurred a debt during the year of Rs. 461, and the balance against Kekri has been increased to Rs. 564, but these sums can be easily liquidated by the Municipalities. The deficit at Todgarh and Pisangan now amounts to Rs. 1,017 and Rs. 931. The Todgarh Dispensary has Rs. 1,500 of invested capital, but Pisangan has little but the Government allowance. Neither of these dispensaries are in a satisfactory condition pecuniarily as their income never comes up to their expenditure. The proportion of the cost borne by Government was 43, against 60 per cent. in 1883.

For the percentages of the total expenditure see Table 16 given above. Each case cost 49 pie against 38 pie in 1883, the large sum spent on building accounting for the additional expenditure. Each diet cost 11 pie, being 5 pie less than the average for the previous year.

TABLE 17.—*Patients and Cost.*  
STATEMENTS II AND V.

	CASES.		DAILY AVERAGE.		AVERAGE DURA- TION OF CASES.		Average daily dieted.	Average cost of each case.	Average cost of each diet.
	In-door.	Out-door.	In-door.	Out-door.	In-door resid- ence. Days.	Out-door attend- ance. Visits.			
Ajmere . . . . .	414	16,381	16	90	14	2	9	33	11
Kekri . . . . .	83	2,552	1	28	11	4	0.05	67	19
Beawar . . . . .	170	10,296	8	62	17	2	4	65	11

65. In comparing those dispensaries in the Ajmere Division which receive in-patients, it must be remembered that the average cost of each case at Beawar was raised by building expenses, and at Kekri by the comparatively small number of cases treated. The average cost of each diet varied from 11 pie at Ajmere and Beawar to 19 pie at Kekri, where there was only 1 in-door patient per diem under treatment.

66. In Native States the whole income of the dispensaries is contributed by the different Darbars. No subscriptions are received from the public and nothing is given from municipal or other local funds. The expenditure was slightly in excess (not quite 2 per cent.) of that for the previous year, the increase being chiefly shown under "Establishment" and "Medicines," and is accounted for by the opening of 3 new dispensaries. The average cost of each case treated, 44 pie, was 6 pie less than in 1883, while the average expenditure on each diet, 16 pie, was lower by 1 pie than in the previous year.

67. The percentages of expenditure in Native States differ considerably from those given for the Ajmere Division; in establishment the numbers are 68 and 44, the higher ratio being chiefly due to the comparatively large pay received by some of the Hospital Assistants in Native States. The cost of repairs to or erection of buildings is not shown in the returns received from the Darbars.

Kotah . . . . .	3	217	11,558	11	126	18	4	6	72	11
Jhallawar . . . . .	5	140	19,914	8	153	21	3	8	65	21
Total or average . { 1884 . . . . .	57	2,727	262,493	141	2,248	19	3	123	43	18
1883 . . . . .	53	2,679	221,722	138	2,349	18	4	109	32	16

68. The above table makes it easy to compare with each other those States which have more than 1 dispensary. Each in-patient remained on the average 19 days in hospital, the time varying from 15 days in Bhurlpore to 24 days in Ulwur. Each out-patient paid on the average 3 visits to the dispensary. The cost of each diet varied from 11 pie in Bhurlpore and Kotah to 21 in Jhallawar, the average for the 8 States in the table being 18 pie. This strange variation in the cost of feeding patients is partly accounted for by the different customs prevailing with regard to the supply of firewood; in some places it is given by the Darbar and in others it is purchased, the price being included in the accounts in the ordinary way. The cost of each case treated in Bhurlpore was 28 pie and in Kotah 72 pie. As stated in previous reports, the small expenditure in Bhurlpore is not a matter for congratulation, as it is attributable chiefly to the low rate of pay received by the Hospital Assistants. The high average obtaining in Kotah appears to be mainly due to the small number of patients treated, compared with the other States given in the above table.

69. Surgical instruments and appliances were inspected in all the institutions visited during the year, and the half-yearly returns furnished by the executive medical officers and subordinates holding independent charges have been regularly received and carefully checked. Sums recovered for articles lost or injured through carelessness or neglect are paid into the treasury to the credit of Government in the Military Department.

SECTION III.—JAILS.  
TABLE 19.—Cases and Deaths.  
STATEMENT II.

		Number of jails.	Average number of prisoners of all classes.	Cases in Hospital.	Average daily sick.	Deaths.	Average duration of cases, days.	Percentage of deaths to cases treated.	DEATH RATIO PER THOUSAND PRISONERS PER ANNUM.				
									Total.	Quarters of the year.			
										1st.	2nd.	3rd.	4th.
Ajmere Division	1883.	1	562	216	6	6	10	2	11	12	12	20	12
	1884.	1	583	161	6	2	13	1	3	8	...	...	8
Native States	1883.	13	2,695	4,712	166	89	12	2	33	20	20	52	36
	1884.	13	3,020	5,473	187	136	12	2	45	24	32	64	56

70. In the Ajmere jail the daily average number of prisoners was 583, against 562 in 1883. The total number of admissions to hospital was 161, a decrease of 25 per cent. on the previous year, and the average daily sick, 6, was the same as for 1883. Only 2 prisoners died, the death-rate falling from 11 to 3 per thousand. These results reflect credit on the management of the jail, and speak well for the healthiness of its situation.

71. In Native States in the 13 jails from which returns are received the daily average number of prisoners was 3,020, against 2,695 in 1883. The total number of admissions to hospital and the average daily sick were higher by 16 per cent. and 12 per cent. respectively, while the mortality, which was heaviest during the third and fourth quarters of the year, rose from 33 to 45 per mille. Excluding cholera, however, which may be regarded as exceptional, the death-rate was 37 per thousand, and this is not a high ratio, considering the amount of sickness caused by malaria among the general population.

TABLE 20.

	Price of wheat per rupee in the Ajmere Division.		AJMERE DIVISION.		NATIVE STATES.	
			Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
	Seers.	Chittacks.				
1880 . . . . .	11	10	484	10	2,806	48
1881 . . . . .	16	2	429	4	2,787	46
1882 . . . . .	15	12	495	26	2,662	36
1883 . . . . .	15	5	562	11	2,695	33
1884 . . . . .	16	3	583	3	3,020	45

72. Taking first the 8 jails in which the daily average number of prisoners exceeded 100, we find that in 6 of them the mortality was higher than in 1883, and notably so at Jeypore, Oodeypore, and Bhurtpore, where it rose from 50, 22, and 49 to 75, 44, and 60 per thousand. The death-rate at Jeypore and Bhurtpore is reduced to 60 and 33 per mille if cholera be omitted. At Jodhpore it fell from 40 to 25 per thousand, and at Jhalrapatan no fatal case occurred, the mortality for the previous year having been at the rate of 49 per thousand.

73. There are 5 small jails in which the average daily number of prisoners aggregated 337. In 2 of these (Sirohee and Shahpura) there were no deaths during the year, but in 3, Dholpur, Tonk, and Kerowlee, the mortality reached the high figures of 117, 98, and 88 per mille; exclusive of cholera the ratios are 106, 16, and 76 per mille. The total number of deaths in these jails was in Dholpur 11 (1 from cholera), in Tonk 6 (5 from cholera), and in Kerowlee 7 (1 from cholera).

74. Much has been done in the Jeypore jail during the last few years for the benefit of the prisoners, and some considerable improvements in ventilation were effected in 1884, but so long as the present over-crowding continues the prisoners are unlikely to remain healthy. The Agency Surgeon informs me that the question of providing additional prison accommodation is now being considered.

The extensive and important alterations made in the Kerowlee jail during the past year should exercise a favorable influence on the health of the inmates, who are amply fed and sufficiently clothed. The present Maharana purposes carrying out the intention of His Highness's predecessor by building a new jail at Oodeypore, and plans are now being prepared for it.

The new prison at Tonk should shortly be ready for occupation. It was utilized with good effect for the reception of prisoners when cholera appeared in the old jail. The Dholpur Jail has been much improved of late years. It was clean and in a good sanitary condition when recently visited, and nearly all the recommendations made regarding food, clothing, and latrines had been carefully attended to. The crowding, however, is still considerable, though less than it formerly was. The large amount of sickness in this jail during the past year was probably mainly owing to the unhealthiness of the season. No death occurred in the Jhalrapatan Jail, which had an average population of 186. The Agency Surgeon reports that a larger ration of vegetables and the administration of amchur had a decidedly beneficial effect on the health of the prisoners.

TABLE 21.—*Causes of Admission and Deaths.*

## STATEMENT III.

		PERCENTAGE IN THE TOTAL CASES AND DEATHS.									
		Malarial fever and spleen.	Cholera.	Rheumatism.	Ophthalmia.	Respiratory diseases.	Diarrhoea and dysentery.	Boils, abscesses and ulcers.	Skin diseases.	Injuries.	All others.

	1884	39	0·67	3	1	6	21	7	2	3	17
		<i>Deaths.</i>									
Ajmere Division	1883	...	...	...	...	17	17	...	...	33	33
	1884	...	...	...	...	...	...	...	...	...	100
Native States	1883	9	7	...	...	23	39	1	...	2	19
	1884	10	17	...	...	20	32	...	...	1	20

75. In the Ajmere Jail 25 per cent. of the cases treated were due to malarial fever and spleen, being a decrease of 8 per cent. on 1883. The admissions from skin diseases, ophthalmia, and respiratory affections were larger by 10 per cent., 4 per cent., and 3 per cent. than in the previous year, while boils, abscess and ulcers, and bowel complaints were less frequent by 8 per cent. and 3 per cent. Two prisoners died during the year, 1 of apoplexy, and the other of acute Bright's disease.

76. In the jails of Native States malarial fever and spleen contributed 39 per cent. of the cases treated, an increase of 9 per cent. on 1883. With the exception of Jodhpore this increase occurs in all the jails, and particularly in those at Bhurtpore, Jhalrapatan, Dholpur, and Shahpura. There were more cases of bowel complaints by 2 per cent., and fewer of boils, abscess, and ulcer by 4 per cent. than in the previous year. The percentages of the other diseases given in the above table vary but slightly for the 2 years.

77. Cholera appeared in 5 jails and caused 24 deaths out of 37 cases. The disease commenced in the Jeypore Jail on the 2nd of July and ceased on the 20th of August, having attacked in that time 12 prisoners, all of whom died. The dates of seizures were 2nd July (1), 19th (1), 20th (1), 23rd (1), 26th (2), 5th of August (1), 13th (1), 19th (1), 20th (1), 26th (1), and 28th (1). The disease was not confined to any barrack or part of the jail, but seized a victim here, and another there, in a most promiscuous manner. There was nothing peculiar so far as could be ascertained in the habitations or habits of those attacked.

There were 15 cases and 5 deaths from cholera in the Bhurtpore Jail between the 18th of August and the 2nd of September, and 5 cases and 5 deaths in the jail at Tonk between the 29th of August and the 14th of September. On the 15th of September the old jail at Tonk was abandoned and the new building occupied, after which no more cases occurred. Three prisoners at Kerowlee and 2 at Dholpur were seized with the malady, and 1 in each jail died of the disease.

78. Thirty-two per cent. of the mortality in the jails of Native States was occasioned by bowel complaints, and 20 per cent. by respiratory affections, being a decrease of 7 per cent. and

3 per cent. on the ratios recorded for the previous year. Cholera and malarial fever caused a greater mortality by 10 per cent. and 1 per cent. than in 1883. Of the 60 prisoners who died in the Jeypore Jail, 18 were over 60 years of age, and 11 of these were admitted to hospital on the day of their imprisonment.

79. Comparing the percentages of cases and deaths in the Ajmere Jail with those in the jails of Native States, we find that malarial fever was less frequent by 14 per cent. and less fatal by 10 per cent. in Ajmere. Bowel complaints caused more admissions by 14 per cent. in Native States, and a mortality of 32 per cent., no case of this nature proving fatal in Ajmere, 9 per cent., 10 per cent., and 4 per cent. fewer patients were treated in Native States for injuries, skin diseases, and ophthalmia. Cholera was entirely absent from the Ajmere Jail, while 0.67 per cent. of the cases and 17 per cent. of the deaths in the jails of Native States were due to this cause.

80. Efforts have been made to obtain the information asked for by the Surgeon-General, according to Statements XIV and XV of the Standard Series, but not with sufficient success to render these forms available for this report. As the statistics required have been received, for the most part incorrectly, from 8 jails only, it was considered advisable to adhere to the returns hitherto submitted, and these are given in Appendices marked II, III, A, and IIIB. It is hoped that Statement XV will be furnished for 1885 by all the jails, but as there is a decided objection on the part of several of the Darbars to afford information regarding the cost of their prisons, it is improbable that Statement XIV will be willingly supplied for some time to come. In one instance it was stated that these statistics were not forthcoming, as no accounts were kept, and probably in other places they are kept so indifferently as to make it exceedingly difficult, if not impossible, for the Darbars to give useful information on the subject of expenditure.

TABLE 22.
